AmiVit

Start booster for chicks

improved vitality

fast acting

less mortality

Situation

The first hours in the life of chickens represents a special challenge due to hatching, vaccination, transportation and housing. When day old chicks arrive at the farm the nutrients they require must be provided as soon as possible to ensure a quick recovery and a good start in production.

What is the solution?

AmiVit is a liquid complementary feed which provides poultry with additional amino acids, vitamins, fast energy, trace elements and electrolytes.

- contains amino acids, the building blocks of proteins, which are essential for body weight development
- the B vitamins act as coenzymes and their presence is fundamental for optimal body function
- the energy mix includes among others dextrose for fast energy supply

Feeding recommendation

Poultry chicks: 1.0–2.0 L per 1,000 L drinking water for at least 3 days for an ideal chick start

Poultry: 1.0 L per 1,000 L drinking water for at least 3 days in situation of higher nutritional needs

Advantages?

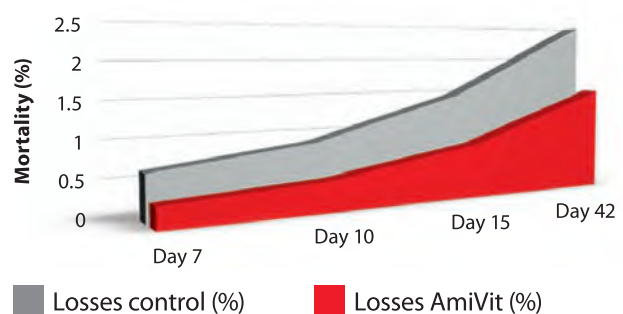

Liquid complementary feed for an ideal start for chicks and sustainable production. The well balanced ingredients in AmiVit assist in the development of a strong immune system, an optimally working digestive tract and support the protein and energy metabolism right from the start. The birds are able to recover quickly after stress situations and maintain good production levels throughout the fattening period.

Key ingredients per litre

Lysine	1.20 %
Methionine	0.50 %
Threonine	0.60 %
Vitamin B ₁	1,000 mg
Vitamin B ₆	1,000 mg
Vitamin B ₁₂	5,000 mcg
Nicotinamide	5,000 mg
L-carnitine	4,000 mg
Zinc	2,000 mg
Sodium	1.35 %

Amivit reduces overall mortality in poultry

(Trial with 37,000 broilers per group. AmiVit applied from day 1 – 7 with 1 L / 1,000 L water)

At a glance

- for an ideal start for chicks
- additional amino acids, vitamins and fast energy
- quick recovery after stress situations
- electrolytes to avoid dehydration of chicks

Packaging: 1 litre, 5 litres
